

TV over Cat-5/UTP

> 751 Compact Receiver Unit

The 751 unit connects to the MediaStar Compact Video Hub, (Part 740/743), at distances of up to 400m (1300ft) via an installed Cat-5/UTP cabling system. The linepowered 751 unit outputs baseband video and stereo audio to plasma screens, projectors, TVs and PC workstations. Coupled with the MediaStar Compact IR routing feature, viewers are able control remotely located IR equipped devices such as DVDs and Satellite Decoders. Any user viewing a MediaStar Compact Receiver Unit can control the input device. When a channel is selected by a user an IR pathway is opened between that user and the AV device being viewed and by using the device's own remote control the user can operate the remote AV device.

Included within the scope of delivery:
751 unit, Quick Reference Guide, Cat-5 Patch Lead 1m(3ft), SCART to 3 phono adapter.
