

TV over Cat-5/UTP

> MediaStar Pro

The MediaStar Pro system is capable of delivering up to 180 PAL and 200 NTSC channels of TV and AV sources through the CAT-5/UTP structured cabling infrastructure. The heart of the system is the MediaStar Administration software, a comprehensive management program which allows System Managers complete control of the MediaStar Pro system and the ability to determine the privileges and access rights accorded to individual users and groups. The MediaStar Administration software monitors and addresses the MediaStar Video Hub Chassis, the hardware switches which route the video and audio content to the appropriate end points on the system, in addition to managing the MediaStar Evolution IPTV elements of the solution as well. The MediaStar Administration software is the gatekeeper that ensures that only the appropriate content is delivered to specific authorised end users.
